RJS is a UK based  
waste management  
and asbestos  
company operating  
nationwide from our  
head office in the  
south of England

Drawing on years of experience working in the waste management industry, asbestos surveying & removals and health & safety. We are able to provide advice and support in building your waste management plan in order to meet your waste disposal obligations. We aim to reduce your worry whilst offering a quality service at a fair price.

We provide a complete waste collection, disposal and recycling service for businesses throughout the UK. We specialise in hazardous waste

and "difficult" non-hazardous waste that should not be landfilled, for businesses ranging from small independents to larger companies, factories, construction companies and multinational organisations.

As well as our waste disposal service we also provide:

- asbestos surveys
- asbestos removals
- soft-strip
- demolition works
- training

We provide a complete waste collection and asbestos service

Waste Disposal

Our experts will tailor  
a cost effective waste  
storage, collection and  
disposal programme  
to meet your  
environmental needs

Prevention	Reducing the amount of waste created
Preparing for re-use	Using elements of discarded item again
Recycling	Turning waste into a new products
Other recovery	Incineration with energy recovery
Disposal	Landfill and incineration

UK Waste Regulations place a duty onto businesses or organisations that produce or handle waste to attempt to prevent it and to apply the waste hierarchy when transferring it.

During our visit to your site we will identify which processes produce waste and where and how it is stored.

Our audit of your site will include a discussion of the volume of waste produced in any given period and the current frequency of collections.

We provide a waste clearance service for construction sites, offices, commercial and domestic sites.

We can assist you with meeting your waste storage and disposal responsibilities

Asbestos Surveys

RJS asbestos  
surveys are fully  
insured and  
conducted by BOHS  
P402 certified  
asbestos surveyors

Regulation 4 of the Control of Asbestos Regulations states that landlords or duty holders have the responsibility to manage asbestos containing materials (ACMs).

An asbestos management survey provides information on any asbestos identified, its condition and how it should be managed, i.e. labelled, encapsulated or removed and this forms part of your Asbestos Register.

Management surveys cover you for normal occupancy and maintenance but if you are planning to have building work carried out in your premises you must have a more invasive inspection, called a Refurbishment Survey.

Where part or all of a building is to be demolished you must have a Demolition Survey.

We carry out Asbestos Management Surveys and Refurbishment/Demolition Surveys

[www.rjswastemanagement.co.uk](http://www.rjswastemanagement.co.uk)

Call: 01243 213273

email: [info@rjswaste.co.uk](mailto:info@rjswaste.co.uk)

Asbestos Removals

RJS can manage  
all of your  
asbestos removal  
requirements

The normal recommendation for asbestos containing materials (ACMs) that are identified during the course of a survey and that are likely to be disturbed during refurbishment work is to remove them altogether.

For higher risk materials, such as asbestos insulating board (AIB), lagging, insulation and sprayed coatings, removals must be carried out by a licensed contractor. This is because they have the potential to release larger amounts of fibre than lower risk materials such as asbestos cement.

The method for removing asbestos will differ depending on the material that contains it and how it has been applied. In most cases the area where work is to be carried out will need to be sealed off and the air flow controlled. This normally involves construction of an airtight enclosure and use of specialist air pumps and filters. The operatives themselves will wear special overalls and breathing apparatus and must go through careful procedures to decontaminate themselves when leaving the enclosure.

We can assist with all your asbestos removal or encapsulation requirements

Call: 01243 213273

email: [info@rjswaste.co.uk](mailto:info@rjswaste.co.uk)

Soft-Strip

RJS Waste can  
conduct a soft strip  
clearance as a single  
job or as part of a  
larger project

Soft strip works are conducted prior to demolition, refurbishment or remodelling of a building. The intention is normally to leave nothing but the steel frame/shell and involves removal of all non-structural elements of the interior and exterior, including:

Fixtures & fittings (doors, windows, bathroom & kitchen fittings), internal walls, ceilings, temporary structures, equipment and machinery

The works have the potential to produce high levels of dust and noise so careful planning is required to reduce this. This includes limiting the number of people in the work area, screening work areas, use of RPE (Respiratory Protective Equipment) and suppressing dust using water.

High levels of noise are often unavoidable but RJS Waste can work with the client to arrange to keep the noisiest works to times when they will cause the least disruption.

We can manage any soft strip clearance - large or small

[www.rjswastemanagement.co.uk](http://www.rjswastemanagement.co.uk)

email: [info@rjswaste.co.uk](mailto:info@rjswaste.co.uk)

Demolition

RJS will ensure that  
your demolition  
project is managed  
and executed safely  
and effectively

Demolition is covered by the Building Act 1984 and all works must comply with the Construction (Design and Management) Regulations 2015. Before starting the demolition a health & safety plan must be produced by the principal contractor and notification given to the local authority.

Careful planning is essential to identify factors such as the size and position of the building, access and the surrounding areas, construction style of the building (steel or concrete framed, brick built etc) and the

materials comprising the structure. Consideration has to be taken for whether hazardous materials such as asbestos are present. The building may also require a soft strip to remove all non structural elements.

All jobs will have a Method Statement & Risk Assessment compiled to ensure that works are carried out safely and efficiently.

We can handle all your demolition needs

Chemical Waste

RJS has the  
flexibility, capability  
and commitment to  
provide quality, cost  
effective solutions

Hazardous waste is that which contains substances or has properties that might be harmful to human health or to the environment. This may be immediate or over an extended period.

These substances are categorised according to how dangerous they are. They can be either, very toxic, toxic, harmful, corrosive or irritant.

Chemicals that fit into this category and for which special measures should

be taken include :

Paints, Adhesives, Solvents, Detergents, Cleaning Products  
Fertilisers, Lubricants, Varnishes, Pesticides, Thinners

With more stringent rules and regulations on waste disposal it is vital to ensure that your hazardous waste is handled correctly and full documentation is provided at every step.

We can handle every type of chemical waste

email: [info@rjswaste.co.uk](mailto:info@rjswaste.co.uk)

Fly-Tipped Waste Collection

In recent years the number of fly-tipping incidents has soared due to a rise in landfill tax for the disposal of waste and a significant increase in waste collections by non-licensed personnel.

It is a crime to illegally dump waste due to the negative effect that it can have on the environment. Syringes, chemical waste and other toxic wastes can present a risk to human health and can harm wildlife and farm animals. This might be from direct contact on the site of the fly-tipped

waste or by the waste getting into a nearby water source. Things like furniture and tyres can be a fire hazard in wooded areas.

The dumping of waste also affects the appeal of an area and can have a detrimental impact on future investment within that area. This criminal act can spoil our neighbourhoods and quality of life for children playing in these areas.

We work with councils and landlords to clear fly-tipped waste from their land

[www.rjswastemanagement.co.uk](http://www.rjswastemanagement.co.uk)

email: [info@rjswaste.co.uk](mailto:info@rjswaste.co.uk)

WEEE Waste Collection

We can design your  
WEEE recycling  
strategy with  
effective storage  
and collection  
procedures

The main aim of the WEEE Directive is to encourage the recycling and reuse of electrical and electronic waste and by doing this it hopes to reduce the amount that is produced.

Waste Electrical and Electronic Equipment (WEEE) contains significant amounts of precious metals and halogenated substances and by recycling and reusing it we can significantly reduce the requirement for extraction of new raw materials and thus reduce the impact on the environment.

WEEE is in the top five growing waste streams within the UK and currently produces up to one million tonnes per year, with this figure set to rise substantially within the next decade.

Disposing of redundant IT equipment and the sensitive information that a hard drive may hold is a concern for every business. We will provide a data destruction certificate for any hard drives that are collected

RJS are experts in managing your WEEE waste and secure destruction requirements

[www.rjswastemanagement.co.uk](http://www.rjswastemanagement.co.uk)

email: [info@rjswaste.co.uk](mailto:info@rjswaste.co.uk)

Office Clearances

RJS can help  
you to comply  
with the EU  
Waste Directive  
regulations when  
clearing your  
office or site

Clearances of offices, building sites, schools and factories, whether large or small, are still governed by EU regulations regarding handling of waste materials.

Clients are required to adhere to the Waste Hierarchy as closely as possible, by re-using or recycling where practicable. It is no longer reasonable or feasible to simply throw your obsolete furniture etc into a skip for disposal in land-fill.

RJS will assess the nature of your waste and will manage the collection, removal and re-use/recycling so that you don't have to worry about it.

You will be provided with all certification, waste consignment notes and data destruction certificates as necessary.

We will help you to fulfill your duty of care and make your clearance as painless as possible

IOSH Working Safely Training

# RJS is authorised by the Institution of Occupational Safety and Health to provide the Working Safely V 5.0 training course

The IOSH 'Working Safely' course is suitable for people at all levels working in any industry and in an office environment that need to understand the essentials of Health and Safety in the workplace. Our trainers will guide you through the course and check on progress throughout the day to ensure you have the practical application, knowledge and understanding of the course content to achieve a positive outcome for the end of course assessment. Interactive course materials are structured to keep learners focused and give them a basic understanding of the following Learning Outcomes:

- Defining hazard and risk
  - Identifying common hazards
  - Improving safety performance
  - Protecting your environment
  - Risk Management
- Classroom courses are recognised by CSCS as equivalent to a Level 1 Award in Health and Safety in a Construction Environment

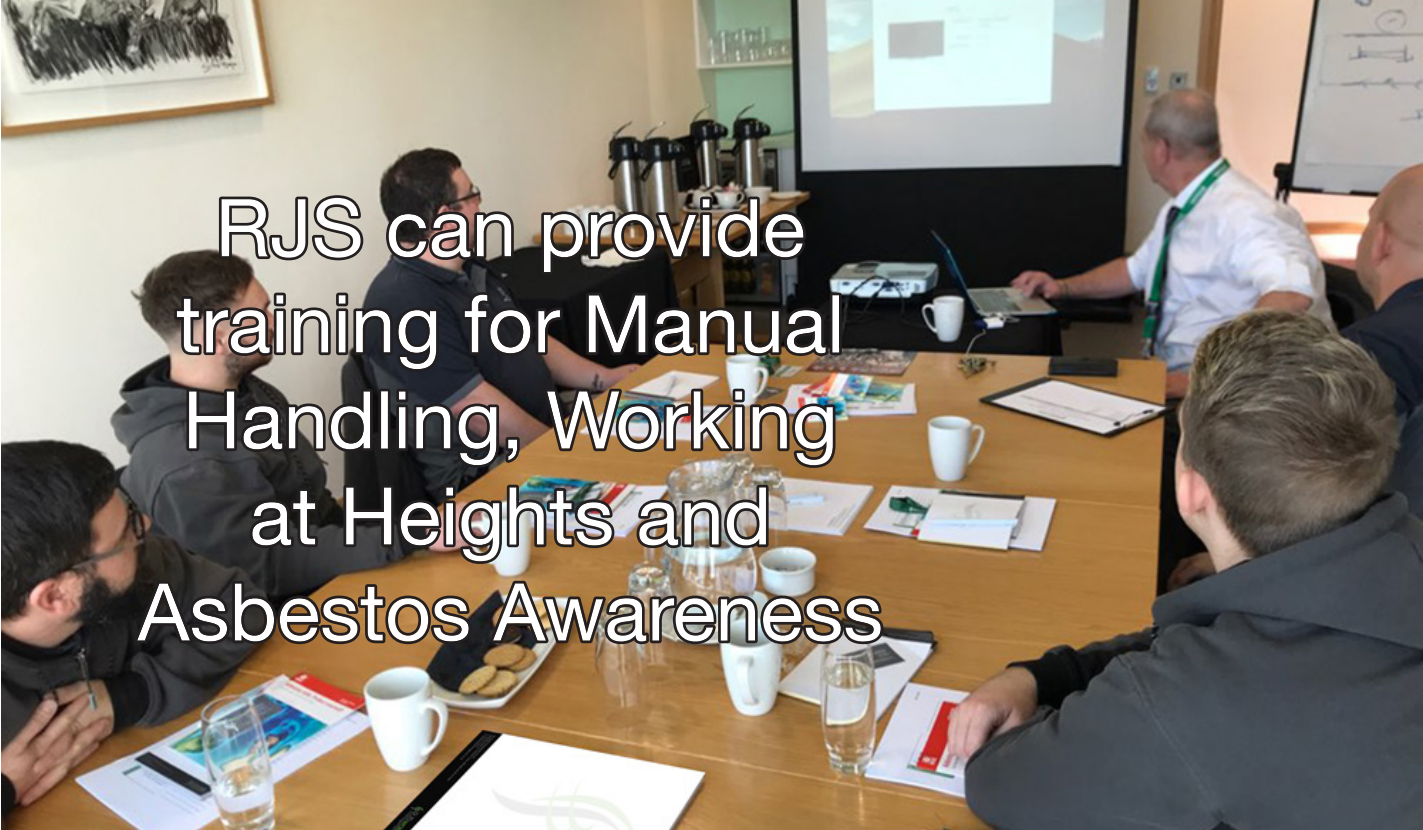

Successful delegates are awarded an IOSH Working Safely certificate

Asbestos Awareness & Safety Training

# RJS can provide training for Manual Handling, Working at Heights and Asbestos Awareness

What can you expect from us at RJS?

- Qualified trainers who are focused on your success
- Safe and comfortable training environment with refreshments
- Guidance, advice and support from our trainers and technical administrator, who offers excellent customer care - making sure that your queries are answered promptly and course bookings go smoothly

The training team at RJS Waste Management (UK) Ltd hold Management and Assessor qualifications in Education as well as qualifications in Health & Safety including NEBOSH and IOSH.

The course venue provides a comfortable and safe learning environment which is easily accessible from the A27 near Chichester and offers free parking and excellent facilities.

If you prefer we can deliver the courses at your workplace.
